What is Nearpod?

Nearpod is an online tool that allows teachers to use slide-based teaching both in the classroom and remotely thanks to a hybrid layout.

Nearpod

Teachers can create lots of different interactive learning resources that allow students to engage and learn via their device or a single screen in the room.

Nearpod

It's also possible to add in question points along the way and have the students take part as you go.

Nearpod

Nearpod is also useful as a formative assessment tool and can output student efforts in easy-to-analyze graphs and charts for a clear snapshot of progress.

Nearpod

Nearpod allows teachers to create lessons from scratch or use the existing library of more than 15,000 lessons and videos,

Nearpod makes videos interactive

Nearpod is great for making YouTube videos interactive. Simply select the one you want and then you can add assessment questions at certain points along the way. So all students need to do is watch and select the correct answer as they watch – ensuring they pay attention and allowing you to see how much they know, or areas that need attention.

Nearpod and Virtual Reality

The use of virtual reality is also a nice addition as Nearpod works with VR headsets to allow students to explore an area, much like a school trip, only without a limit on distance.
