

Application: **Slido** and **Kahoot** and **Jamboard**

Class: II.AC

Major / Field of study: Business Academy

Subject: UCTp – účtovníctvo praktikum (accountancy practices)

Topic of the lesson: Accounting the economic outcomes

Language: Slovak

Teacher: Ing. Anna Šarlinová

At the beginning of this lesson, teacher introduced the basics of the topic and divided students into four groups. They were answering individual questions using slido.com in order to analyse the previously learned material. Students cooperated intensively by searching and discussing the content. The teacher discussed their activity afterwards.

Concerning the second online activity, Kahoot, students worked individually. This tool was used as a sort of testing and assessment based on the previous learning process.

Third tool used in the lesson was Jamboard. Students were deciding what kind of economic items (costs and yields) are accounted to which category. Own notes of the teacher properly added the visual display. This resulted into group calculations (e.g. taxes, economic outcomes, etc.).
